
Are you looking for the best way to unlock iPhone model A1532? Well, you're in luck—here's the basic procedure that will allow anyone to unlock an iPhone 6 or 6s that is running on iOS 10.1.1. If you're using something different like iOS 9, then don't worry! We have instructions for that, too.

Step 1: Download and install iTunes 12.3 (latest version) or download it for free from this page if needed; make sure your computer meets its system requirements (PC with Windows 7 SP1/Windows 8/8.1 (64-bit)/Mac OS X 10.10.5 or 10.11).

Step 2: Now it's time to install the latest version of iTunes (iTunes 12.3); download and install it if you haven't done so already; ensure that you meet the computer requirements (PC with Windows 7 SP1/Windows 8/8.1 (64-bit)/Mac OS X 10.10.5 or 10.11). To unlock iOS 10.1.1, you'll need a Windows PC in order to download the latest version of iTunes.

Step 3: Now that you have downloaded and installed the latest version of iTunes on your computer, run the program and then plug your iPhone into your computer with a USB cable.

Step 4: You will see that iTunes will prompt you to update or restore your iPhone; select 'Restore.' For users on versions of iOS 9, select 'Update.' If you don't see this prompt, click on the iPhone icon in the top left of iTunes, scroll down to 'Summary' and click on 'Check for Update'. This should prompt iTunes to check if there is an update available for your phone.

Step 5: Once you have selected 'Restore,' you should see a prompt for iTunes to download the latest version of iOS.

Step 6: The iPhone will now begin re-installing its operating system, so you may have to wait for this process to happen. The restore backup will be saved in your computer, so if you want to use it again, just click on 'Save As' under tools in iTunes and store it in a safe location. If you wish to continue with the unlocking process, however, select 'Don't Back Up.'

Step 7: Now comes the fun part! Once the iPhone has finished restoring its firmware, iTunes will prompt you with 'Set up your iPhone. You can reconnect your iPhone to your computer by USB.'

Step 8: Once you have re-connected your iPhone to your computer, click on 'Restore from iTunes backup' in the 'Summary' tab in iTunes.

Step 9: iTunes will now begin searching for an available backup for you to restore from; select the one you wish to restore from.

Step 10: You are now ready to unlock your iPhone! You can check if it is unlocked by going into Settings > General > About and checking the model number at the bottom of the screen.
